LASER REJUVENATION CLINICS

Uncover Your  
Natural Beauty

ADVANCED  
AESTHETICS

# Laser Hair Removal

*Laser Rejuvenation Clinics and Spa is one of the first facilities in Canada to announce the use of breakthrough technology. A laser or polychromatic light damages and effectively removes unwanted body hair - all in a spa-like setting.*

## What happens during the procedure?

Our unique feather touch process is yours for the enjoyment. First our clinician cleanses your skin and applies a cool soothing gel. Next, our specially trained registered nurse scans the area with the light. This unique process affects the hair follicles only, disabling the hairs capacity to grow. For the finishing touch, the aesthetician cleanses the treated area, applies a soothing mask and moisturizer to nourish your smooth silky skin. A complimentary facial or body wrap completes our enlightened approach to beautiful skin.

## Is it painful?

Not really, if at all. It has been described as a tingling sensation. This is part of the innovation of the laser light. Laser hair removal is truly light fantastic.

## How Does the Laser Remove Hair?

The process to remove the hair follicle is called selective photo-thermolysis. It involves selecting an intended target. In this case the target is the melanin present in all hair follicles. The laser uses a wavelength of light specific to the melanin. The light passes harmlessly through the top layer of the skin (epidermis)

and is absorbed maximally by the melanin in the hair follicle and minimally by any other tissue. Using special filters, or

*chin test patch  
1 treatment, 2 months after treatment*

specific wavelengths of laser light, treatments can be tailored to different skin types and different hair colors.

## How Effective Is the Laser?

Based on our experience with the laser and the manufacturer's claims there is anywhere from 20-50% removal of hair with just one treatment!

## What are the side effects?

Side effects, if any, are negligible. Occasional cases of mild skin irritation, similar to mild sunburn, may occur. Very rarely we may see persistent redness, blistering or scarring.

## What Areas Can I Have Treated?

Any area can be treated but the most commonly treated are the upper lip, chin, neck, chest, underarms, bikini line and legs (no more stubble!). We can even shape eyebrows.

## How Cost Effective Is the Laser?

Laser treatments are both fast and cost effective especially when compared to other methods of treatment.

Waxing may cost \$30 a month, with the typical patient spending \$3,600 over 10 years and investing over one hundred hours.

Electrolysis may involve treatments every two weeks for 3 - 4 years at \$30-\$50 per treatment with costs up to \$4000.

A course of 3 or so treatments for hair removal above the lip with the Laser usually takes only 2 hours and costs less than \$1000. Of course, each patient is unique and the amount of surface area to be treated and the time it takes can vary.

By fulfilling our commitment to bring the safest and most effective technology to our patients, you can always be assured that our medical staff, techniques and procedures are among the best in the world.
